

Amersfoort - The Netherlands, 6<sup>th</sup> January 2009

## PRESS RELEASE

### Conceptronic presents the CFULLHDMaI as the successor to the CFULLHDMA.

The successful Full HD media player (CFULLHDMA) is to be succeeded by the new CFULLHDMaI. While the product looks the same on the outside, it has been outfitted with major extra functionality on the inside, such as Samba server support, a BitTorrent download client and support for the Conceptronic wireless 300Mbps 11n USB adapter.

The award-winning CFULLHDMA functions as a personal portal for streaming digital media files at Full HD resolution (1080p) to a TV and/or home cinema set. The built-in UPnP AV media client provides easy access to all files found on compatible storage devices (e.g. the Grab'n'GO CH3WNAS and CH3SNAS, or a computer). The SAMBA/NFS client allows instant access to a shared folder on a network. Conceptronic is now presenting the CFULLHDMaI to get even more out of the product; the same entertainment with more functionality.

#### **Samba server support**

The CFULLHDMaI does not contain an internal hard disk, but thanks to the USB connector on the back it is possible to link it up to an external drive. This function was also available on the CFULLHDMA, but the new feature with the CFULLHDMaI is the Samba server extension.

The Samba server extension makes it possible to access the external hard drive linked to the CFULLHDMaI from a PC on the same network.

This introduces the ability to copy media files such as films, photos or music from and to the external hard drive over the network using the PC.

#### **BitTorrent download client**

BitTorrent is a P2P (Peer-to-Peer) system which uses a central location to manage its downloads.

The consumer will be able to use this client to download large (media) files from the Internet faster than they could otherwise. When there is an external hard drive or USB memory stick plugged into the USB port, the Download option will appear in the menu and (media) files can be stored directly.

#### **Wireless 11n**

It is now even possible to make the CFULLHDMA (with the latest firmware upgrade) and the CFULLHDMaI compatible with the Conceptronic C300RU, a 300 Mbps 11n USB adapter, after which the consumer will be able to stream media files wirelessly. An 11n router (such as the C300BRS4A from Conceptronic) or a computer with an 11n client will be needed to ensure maximum enjoyment of Full HD films (if the film is being played wirelessly from the PC).

With the CFULLHDMaI, Conceptronic brings all your favourite digital media files to the living room in crystal-clear Full HD resolution (1080p).

## Features at a glance:

- Plays all popular digital media formats, such as XviD, WMV9, MOV, MKV, H.264, VC-1, MPEG 1/2/4, JPEG, MP3, WMA, AVI, SVCD, VCD, ISO, IFO (DVD navigation), VOB and subtitling.
- Supports display resolutions of up to 1080p Full HD.
- Gigabit network connection (compatible with all 10/100 Mbps / Gigabit networks) for fast data transfer.
- Easy-to-navigate menu.
- HDMI and component video connection as well as coaxial digital audio output (S/PDIF).
- Supplied with all necessary cables, stand and remote control.
- Samba server.
- Samba client.
- NFS client.
- BitTorrent download client.
- Wireless streaming using a Conceptronic 300 Mbps 11n wireless USB adapter (C300RU)\*.
- UPnP AV compatible for use with a wide range of media servers.
- Includes 3-metre gold-plated HDMI cable.

\* The C300RU is available separately and is not supplied as standard.
